OBJECTIVE

An adept full-stack developer currently advancing my studies in computer programming at Lambton College. I am eager to leverage my academic knowledge and project experience in pursuing a co-op opportunity.

PROJECTS

Video and audio conferencing application

Developed a video calling app using Node.js/Express with EJS/Handlebars for dynamic content. Integrated MongoDB/Mongoose for efficient database management and Socket.io for real-time communication, ensuring data integrity/security with UUIDv4. (Try it here)

Online Bookstore Management system

Bulit website using Express.js, MongoDB with Mongoose, and EJS templating.Ensured security with bcrypt for password hashing and Passport.js for user authentication.Managed user sessions with Express-session. Employed dotenv for environment variable management.Integrated nodemailer for email notifications, ensuring seamless collaboration and optimal performance. (Try it here)

Tune Up Music Player

Created a Music Player from scratch using HTML5, CSS, and JavaScript.Utilized HTML5 for structuring the player interface and content.Implemented JavaScript for interactive functionalities such as play, pause, skip, volume control, and playlist management.Ensured seamless integration of features and optimal performance through collaborative development. (Try it here)
